

Research Opportunity: UK Keratinocyte Cancer Collaborative (UKKCC) Multicentre Project on Cutaneous SCC

We invite **trainees, CESR candidates, and resident doctors** interested in dermatology to collaborate on a national, multicentre project on cutaneous squamous cell carcinoma as part of the UKKCC. This opportunity includes assisting with the **retrospective cohort study** (identifying cases and collecting data) and/or the **prospective study** (identifying and consenting patients, assisting with sample and data collection). Collaborators will receive training and hands-on experience in conducting a large cohort study, with opportunities to present and co-author publications, or take on a greater role as an NIHR Associate PI.

We are prioritizing recruitment at **UKKCC centres that are open (or about to open)** to recruitment, including but not limited to:

Newcastle, Norfolk & Norwich, London (Barts Health, Guy's & St Thomas', Royal Free, UCLH), Southampton, Royal Devon and Exeter, South Warwickshire, Dundee/Tayside, Greater Glasgow & Clyde, Buckinghamshire Healthcare, Cambridge, North Bristol, Oxford, Cardiff & Vale, NHS Lothian, and The Christie (Manchester).

Support is also available for additional sites requiring ethics and R&D approvals.

If interested, contact UKKCC Trainee Rep Emilia (emilia.peleva@nhs.net) with your **name, stage of training, relevant experience, and current hospital(s)/Trust(s)**. More information can be found on the BAD website: [UKKCC](#).
